Subject: Three Week Update May 16, 2016

On May 13, 2016 the DEQ received the most recent update from Carl Burnham of IRS Environmental on the quantity of Asbestos material removed from the CFAC site to date. The current cumulative total of 30,820 pounds of regulated asbestos waste reflects the removal of materials from the East Rectifier. The waste disposal receipts for April indicate the removal of an additional 25,700 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 748,470 pounds. Structures previously included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, and Compressor Building.

An asbestos project permit is in place through 2016 for the East Rectifier building, and through July for the Laboratory Building. Demolition notifications remain in place for the East and West Rectifiers, Rod Mill Building, and Laboratory Building.
